CONTENTS TO VOLUME 18

COMPUTATIONAL PHYSICS

Issue	Page	
1	1	Development of the SCHOONSCHIP program. H. Strubbe
1	7	Monte Carlo solutions of the solid angle integrals for radiation detectors. B.Th. Stavroulaki and S.N. Kaplanis
2	171	A method for computing selfgravitating gas flows with radiation. W.M. Tscharnuter and K.-H. Winkler
2	201	Symbolic evaluation of dimensionally regularized Feynman diagrams. R. Gastmans, A. Van Proeyen and P. Verbaeten
2	205	The computation of unsteady non-equilibrium shock tube flows comprising a tailor-made discretization of boundary layer terms. R.R. Ritter and F. Demmig
2	211	Some applications of perturbation theory to numerical integration methods for the Schrodinger equation. J. Killingbeck
3	305	A guide to analytic extrapolations. Part II: a program to be used in finding analytic correlations of data, and for detecting zeros and poles of the scattering amplitude. I. Caprini, M. Sararu, C. Pomponiu, M. Ciulli, S. Ciulli and I.S. Stefanescu
3	327	The problem of comparison of two spectra. P.N. Zaikin, V.G. Kritsky and M.V. Ufimtcev
3	331	Use of discrete basis sets in configuration interaction calculation. S. Ahmad and D.J. Newman
3	339	Computer simulation of heuristic reinforcement-learning systems for nuclear power plant load changes control. J. Kitowski and J. Moscinski

COMPUTER PROGRAMS IN PHYSICS

Issue	Page	
1	13	A program generator for the incomplete LU decomposition-conjugate gradient (ILUCG) method. G.K. Petravic and M. Petravic
1	27	Analysis of Faradaic impedance experimental measurements. A. Batana, E.R. Gonzalez and M.C. Monard
1	35	A program to generate closed basic diagrams for product operators. B.D. Chang and S.S.M. Wong
1	63	Chebyshev expansion of the associated Legendre polynomial PLM(x). G. Delic
1	73	Chebyshev series for the spherical Bessel function jl(r). G. Delic
1	87	Frozen core Hartree-Fock program for atomic discrete and continuous states. L.V. Chernysheva, N.A. Cherepkov and V. Radojevic
1	101	Lattice dynamics of group IV semiconductors using an adiabatic bond charge model. O.H. Nielsen and W. Weber

COMPUTER PROGRAMS IN PHYSICS (cont.)

Issue Page

1 109 Z-expansion of matrix elements of one-electron operators for many-electron atoms. M.N. Lewis

1 123 Transport properties of dilute gas mixtures. R.M. Thomson

1 133 Bessel functions Jnu(x) and Ynu(x) of real order and real argument. J.B. Campbell

1 143 Slit height smearing correction in small angle X-ray scattering III: intensity correction program adaptation to arbitrary slit transmission function. M. Deutsch

1 149 Slit height smearing correction in small angle X-ray scattering IV: computation of the correction function for an arbitrary slit transmission function. M. Deutsch

1 155 Program adaptation: to calculate inclusive backward proton production cross sections. K.J.M. Moriarty and H.N. Thompson

1 163 Exact finite range DWBA form factor for heavy-ion induced nuclear reactions. T. Tamura, T. Udagawa, K.E. Wood and H. Amakawa

2 215 A guide to analytic extrapolations. Part I: a program for optimal extrapolation to interior points. M. Ciulli and S. Ciulli

2 245 MCBP: a program to calculate angular coefficients of the Breit interaction between electrons in the low energy limit. N. Beatham, I.P. Grant, B.J. McKenzie and N.C. Pyper

2 261 Plot program for Laue patterns and stereographic projections. E. Preuss

2 277 Calculation of crystal orientations using Laue patterns. E. Preuss

2 281 DOMUS: a program for the analysis of two-dimensional spectra. V.B. Zlokazov

2 287 ECSIMPACT: a special version of program IMPACT for CDC machines with ex-core memory. T.M. Luke and H.E. Saraph

2 297 Radiation potential of a point antenna immersed in drifting cold or hot (hydrodynamical) plasma. E. Fijalkow and G. Mourgues

3 353 Numerical modelling of a chemical plasma. I. REACS: a program to generate all reactions which take place in a plasma of given chemical content. S.A. Roberts

3 363 Numerical modelling of a chemical plasma. II. PLASKEM: a program to predict the variation with time of the number densities of chemical species within a plasma. S.A. Roberts

3 377 Numerical modelling of a chemical plasma. III. DATSTOR: a program to create a database containing information on rate coefficients of chemical reactions. S.A. Roberts

3 385 Calculation of the nucleation and growth of defect clusters. P.B. Kruger and R.M. Mayer

3 401 A program to calculate internal conversion coefficients including higher-order corrections for all atomic shells. R. Der, D. Hinneburg and M. Nagel

3 411 An all-purpose curve-fitting program for functions of several variables. E.D. von Meerwall

3 417 A Fortran program to perform signal averaging, multichannel scaling and pulse-height analysis. E.D. von Meerwall

3 427 Complex angular momentum methods for elastic scattering with an optical potential. T. Takemasa, T. Tamura and H.H. Wolter

3 441 Erratum notice. A compact program of the SCF-Xalpha scattered wave method. S. Katsuki, P. Palting and S. Huzinaga
